

A selection of titles gives an idea of the scope of this work: The distribution of virus disease and the migrant vector aphid; Predators-agents for biological control; Parasites and parasite impact on aphid populations; Modelling the effects of changing windfields on migratory flights of the brown planthopper; and Integrated control of insect vectors of plant virus diseases. These review-type papers are invaluable, not only for summarising current knowledge but also for their extensive lists of primary references. There is a comprehensive index spanning 14 pages.
